STERIVAP®

Large Steam Sterilizer for Health Care
with Excellent Price – High Quality Engineering

protecting human health
**MMM Group – Leading Service Supplier for Health Care**

Since 1954 the MMM Group has been active world-wide as one of the leading system suppliers to the health care sector.

With a complete range of products and services as well as sterilization and disinfection units for hospitals, institutes of science, laboratories and pharmaceutical companies, MMM has established itself as the excellent holder of quality and innovations within the German and international market place.

**Economic Use of Utilities for Reasonable Price**

The new STERIVAP® steam sterilizer represents the ideal choice for everyday use in health care.

STERIVAP® is the right choice for smaller health care facilities as well as for all the central sterilization facilities, specifically designed for economic use of utilities. A high standard of production, up-to-date electronics and quality materials are the standards that STERIVAP® devices adhere to as a matter of course, recognising the need for an extraordinary level of safety and reliability.

**Technical Legislative Standards**

The company BMT Medical Technology s.r.o. holds the certificate to provide a complete system of quality management:

- according to EN ISO 9001, EN ISO 13485
- for the purpose of proving the declaration of conformity according to European Directive no. 93/42/EEC as amended by the Directive no. 2007/47/EC (Class IIb medical devices)
- for production of pressure devices according to Directive No. 97/23/EC, module H/H 1
- for production of pressure devices and steam generators AQSIQ making it possible for BMT to export to China
- certificate of the Accredited testing laboratory No. 1325

The device meets a series of technical standards as for example, EN 285; EN ISO 17665-1 etc.

The device has been issued with the Declaration of conformity.

**It is at our production plants based in Stadlern, Germany and Brno, Czech Republic that we manufacture the products, which meet the requirements of our clients all over the world. Within both of these plants we ensure a high volume of production and thus meet the highly demanding requirements for quality in the field of medical instruments.**

**MMM Group – perfection of medical instruments**

STERIVAP® is designed for the sterilisation of solid, porous, plastic materials and solutions in open bottles. The basic version of the device comes with a utilizable volume of 148 – 1490 litres, and together with the offer of optional equipment it will satisfy the interest of those looking to ensure fast, quality sterilization.

- for production of pressure devices according to ASME Code
- for production of pressure devices and steam generators AQSIQ making it possible for BMT to export to China
- certificate of the Accredited testing laboratory No. 1325

The device meets a series of technical standards as for example, EN 285; EN ISO 17665-1 etc.

The device has been issued with the Declaration of conformity.
Completely New Design
A New Design Version

- massive pressure sterilization chamber with heated jacket, and are made of high-quality stainless steel, applied materials AISI 316 Ti and AISI 316L
- gradient bottom of sterilization chamber for perfect drying
- ground inner surface of the sterilization chamber, coarseness Ra 1,25 µm (Ra 50 µinch)
- perfect thermal insulation of sterilization chamber with special insulation layer Rock wool in thickness of 125 mm and outer insulation jacket made of dip galvanized sheet for substantial reduction of heat losses and easy cleaning and maintenance
- all sterilization chambers are as standard, equipped with two easily accessible inlet connections for validation according to EN 285

piping distributions conducting steam into the sterilization chamber are made as a standard of stainless steel, valves are made of brass
- all piping distributions are thermally insulated
- high-performance, noiseless suction pump for higher efficiency and reliability (two-stage for types 636 to 669)
- single, mechanical filter on supply water inlet for protection of the valve and suction pump
- bacteriologic filter for vent of the sterilization chamber (0.3 µm)
- integrated drain – due to dampness elimination in the device space all pipes are led to one common sump
- single and double door (interleaving) type (type 446 – 6618 vertically and type 9612 – 9621 horizontally sliding doors)

- stainless steel cover sheets are reinforced by a frame ensuring an extended working life in comparison with other usual designs
- easy access to the device is ensured by door lockable panels
- reinforced stainless cover sheets for quiet operation

Intelligent System for Saving Media

- special divided double chamber jacket of sterilization chamber for better and more accurate course of sterilization chamber with an independent and stable chamber pre-heating lowering consumption of demi-water ca 20%
- integrated device for supply water saving, lowering consumption of operating cost by up to 15%
- steam generator with microprocessor automatic control and unique design of steam generator with big capacity and automatic desalination ensures short times of sterilization cycles and permanently high steam quality

Benefits to you – shorter cycle times, economical operation, very low consumption of services, long-term life and reliability of the device
New Control Panel with Intuitive Control

- PLC consisting from two built-in microprocessor control systems (Master-Slave) with own sensors for independent evaluation, control and documentation of operational cycles
- ergonomic positioned control panel at eye level, away from thermally exposed zone
- technology of touch-screen display 8.2" ensures transparent and easy operating on the loading side
- on unloading side (in case of two door type) of the device the LED display with a possibility of monitoring of actual working phase and pressure in the sterilization chamber
- “emergency stop” function integrated into the control panel
- built-in printer for documentation of sterilization processes
- system of chip cards
- possibility of language selection for communication with the device
- transparent digital description of steam pressure in the jacket of sterilization chamber and in steam generator, pressure and temperature in sterilization chamber (reference bottle)
- clock – indicator of the remaining time of the program and the real time indicator

Within the Basic Software Facility We Offer Up to 20 Standard Programs

The sterilizer is standardly equipped with “Preheating program” (134°C/1 min).

Standard programs:
- Unwrapped tools 134°C/4 min
- Wrapped materials 134°C/7 min
- Wrapped materials with intensive subsequent drying 134°C/7 min
- Wrapped products of glass, rubber and plastics 121°C/20 min

Special programs with parameters according to the customer’s specifications:

Seven free programs adjustable at the producer for individual software facility according to specific needs of a consumer e.g.:
- Prions 134°C/60 min
- Disinfection 105°C/20 min
- Solutions in open bottles – 121°C/20 min, spontaneous cooling
- Arnold 100°C, 75°C
- Laparoscopy, alloplasts, plastic materials, optics, ...

Programs according to specific requirements must be validated at the customer’s!

Top safety in solution sterilization – apart from standard working and safety procedures and processes is sterilization of solutions controlled as well as by three independent systems – temperature and pressure check in sterilization chamber, temperature check in reference bottle and minimal necessary time of sterilization cycle. Only when meeting all the cycles mentioned-above will the program declare itself to be complete. The system will then allow the chamber door to be opened.

Standard testing programs for routine testing:
- Vacuum test – test of the chamber airtightness, duration of equalizing phase is 5 min, test duration of 10 min
- Bowie&Dick test 134 – test of steam penetration, 134°C/10 min

Equipment for Service

Automatics PLC control is equipped with a wide choice of software for easy check, maintenance and testing (interactive piping connection chart, testing programs enabling the testing of safety elements of the device, calibration adjustment etc.). Software facility can be extended and modified by means of chip cards system and special service software.

Batch Documentation

- independent documentation of working cycles with pressure and temperature recording, allowing the storage of the last 10 records in the sterilizer memory (up to tens of thousands optionally – SD card);
- connection to a PC and storing the records in the computer memory by means of the “Printer Archive” software;
- connection of the sterilizer to a computer network (LAN) together with the software application Ecosoft and DP 3.5;
- integrated printer allowing to select one of two graphic outputs
Modular System

1. System for manual loading of material
   a) Shelf supports
   b) Perforated shelf
2. System of transport and loading carts
   a) Frame for the loading cart
   b) Loading cart
      1) Universal
      2) Special
   c) For solutions
   d) Transport and loading cart
   e) Hook for unloading of the loading carts
3. Stainless panel sheets of the device
4. Possibility of building-in into stainless steel walls, double sided design of the device enabling to join two service rooms into one
5. Print of graphic record of pressure and by means of build-in printer for documentation of sterilization cycle

Optional Equipment

6. Optional steam source
   a) FD – Steam of central source
   b) ED – Own integrated steam generator
   c) FDED – Combined supply of medicinal/technical steam
7. Thermo-degassing of supply demi-water for the steam generator to minimize the content of incondensable gases
8. Possibility of installation for the device for after-cooling of condensate
9. Stainless steel valves
10. "Air detector" for continual presence of air and incondensable gases in sterilization chamber in the course of each sterilization program for maximum safety of sterilization as compared to routine testing programs (Vacuum and Bowie & Dick test) performed only once a day before the start of a routine operation (HTM 2010)
11. Special programs in chip cards (up to 20 programs on one chip card)
12. Additional mechanical manometers
   a) On loading side
   b) On unloading side
13. Ground inner surface of the sterilization chamber, coarseness Ra 0.8 µm (Ra 32 µinch), Ra 0.125 µm (Ra 5 µinch)
14. Tropical version for countries with high temperature of cooling water
15. Regulation of the device operation – control of energy maximum take-off in case of connection of more devices into electric network
16. Continual control of parameters of input media (pressure air, demi- and cooling water)
17. Automatic starting of warm up cycle is one of a series of energy saving features which will save your working time. The device is switched on according to the pre-set time without the presence of the operator. The equipment is pre-heated and a vacuum test is performed.
18. Automatic sterilizer door opening during a power failure
19. 32 GB memory card for the sterilization cycles recording (up to 100,000 hours of record)
20. "Audit trail" – system events recording on the memory card (conforms to 21 CFR part 11)

Chamber Utilization

1. Sterilization basket
2. Variability in the use of a series of containers
3. Sterilization of solutions – reference bottle with temperature probe PT 100
In addition to the device supplies, we offer a range of services related to the development of central and operating room sterilizations:

- counselling and project drawing including the logistics and capacity calculation;
- turnkey device deliveries including the individual information systems;
- Service and maintenance are ensured fully by a worldwide network of BMT Medical Technology s.r.o. contractual organizations.

BMT Medical Technology s.r.o. contractual fully by a worldwide network of organizations.

Offer of Clients Services

- Technology training of service people, simply, economically, safely.

The ability of the sterilization processes to be validated and recorded is one of the conditions for their quality assurance. For these purposes, the users of STERIVAP® steam sterilizers are also offered a new service - Validation - which allows proving the compliance of the appropriate standards EN 285 and EN ISO 17665-1 with the device parameters. The technical measurement are performed by own accredited testing laboratory.

Environmental Features

The device meets all present ecologic requirements. It does not burden the working conditions and environment. The outer cover of the insulated jacket of the sterilization chamber is manufactured using galvanized sheet with a quality insulation beneath. This substantially reduces the thermal losses therefore saving electric energy. As standard the equipment has a built-in vacuum pump. A uniquely divided double chamber jacket with a steam system allows pressurization of the sterilization chamber, this reduces the demi-water consumption by approximately 20%.

The steam generator is controlled by an automatic microprocessor system and as a standard it is equipped with a clarifying device.

In production we monitor the quality of the materials ensuring a long operational life of the device.

The equipment is fitted with additional components that cool the waste water to a pre-set temperature before it enters the drainage systems.

The production of the equipment and its process cycles are all based on environmentally friendly methods. All the substantial parts of the unit and packaging are recycled.

The unit is made up of 95% steel, 4% of other materials, 1% electric material and plastics. Ecologic liquidation is performed after the disassembling by the authorized person in accordance with EU regulation, which meets the Regulation WEEE (Waste Electric and Electronic Equipment).

Offer of Clients Services

Validation

- high utility value for reasonable price

Technology training of service people, simply, economically, safely.

with instrumentation and ensures a continuous, problem-free operation of the equipment within its installed site. This all guarantees low cost operation and long operational life of the system.
